## TECHNICAL DATA SHEET – DDLAC

### Biochemical Validation Data

**Binding of radioligand on GPCR protein, purified in reference detergent with or without addition of DDLAC as an additive.**

Purified protein was incubated with radioligand in absence (total, blue bars) or presence (Non Specific signal, red bars) of an excess of cold ligand. After filtration on GF/C membranes and washing, scintillation agent was added and radioactivity was detected using a Microbeta2. Specific radioactivity (green bars) corresponds to (total signal) – (non-specific signal).
