TECHNICAL DATA SHEET – FLAC6

Biochemical Validation Data

A2a (GPCR)

M2 (ion channel)

AcrB (Transporter)

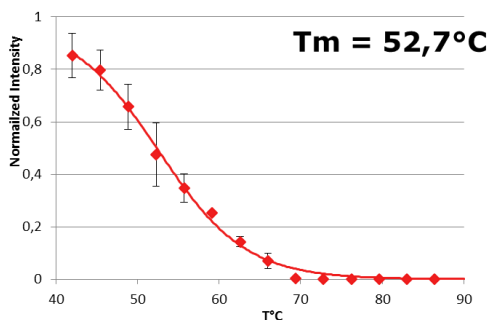

Membrane protein solubilization from various membranes.

Various targets were extracted from biological membranes by using FLAC6 reagent at 5 to 20-fold the critical micelle concentration (cmc). After solubilization, samples were centrifuged at 100000g. Proteins from pellets (P) and supernatants (S) were separated on a 4-15% Tris-glycine SDS-PAGE, transferred to PVDF membrane and immunodetected with either specific or anti-tag antibodies.

T = total, P = pellet, S = supernatant.

A2a

AcrB

Thermalshift assay on membranes solubilized with 15-fold FLAC6 cmc. Unfolding of either A2a receptor or AcrB was followed by western-blotting after applying a temperature gradient and high speed centrifugation.
